I certify that the thesis entitled
" STUDIES ON CERTAIN PHYSIOLOGICAL AND BIOCHEMICAL
ASPECTS OF VISION IN SOME ARTHROPODS" submitted
by Shri SUDIP DEY for the Degree of Doctor of
Philosophy of the North-Eastern Hill University,
Shillong, Meghalaya embodies the record of original
investigation carried out by her/him under my
supervision. She/He has been duly registered and
the thesis presented is worthy of being considered
for the award of the Ph.D. degree. This work has
not been submitted for any Degree of any other
University.

A. Raghu Varman

Place: *Shillong*

Dr. A. Raghu Varman
Department of Zoology
North-Eastern Hill University
Shillong.

ACKNOWLEDGEMENT

The present investigation has been carried out under the valuable guidance of Dr.A.Raghu Varman, M.Sc.,Ph.D., Reader, Department of Zoology, North-Eastern Hill University, Shillong. I express my deepest gratitude to him for introducing me to the topic, constant encouragement and keen interest throughout my investigation and constructive discussions and careful corrections during the preparation of the thesis.

I also express my sincere thanks to Prof. R. George Michael, Head of the Department of Zoology, North-Eastern Hill University, for providing facilities to carry out this research.

I am also thankful to all the staff members and research scholars of the Department of Zoology for their kind co-operation and helpful discussions.

I express my thanks to Prof.M.J.Berridge, Department of Zoology, Cambridge, Dr.Maria E.Rivera, Ruhr Universitat, West Germany and Prof.M.B.Mathews, Department of Pediatrics, University of Chicago for their generous gift of 5- hydroxy tryptamine, Ouabain and several standard mucopolysaccharides respectively.

I thank Mr.S.Roy Choudhury for preparing the diagrams, and Mr.B.K.Das for photography and Mr.Deben Singh and Mr.Inaobi for typing the manuscript.

I am also acknowledging sincerely those who have responded me by sending their reprints and other related literature.

I express my sincere thanks to my friends Mr.Deepak Bhattacharjee, Dr.B.M.Shekharappa and Mr. Samiran Roy for their kind co-operation and constant encouragement during the preparation of the thesis.

I am highly grateful to the authorities of the North-Eastern Hill University for awarding me the Junior Research fellowship which facilitated me to carry out this research work successfully.

SUDIP DEY N.E.H.U.
SHILLONG

CONTENTS

List of Tables	(i)-(ii)
List of Figures	(iii)-(v)
General Introduction.	1 - 7
Chapter I	
Histochemical analysis of the lens-cuticle: Acid mucopolysaccharides.8 - 66
Chapter II	
Ascorbic acid in the compound eye	67 - 100
Chapter III	
Fluorescent substances of the compound eye	101 - 148
Section 1. Resilin	102 - 125
Section 2. pteridines	126 - 148
Chapter IV	
Adenosine triphosphatases of the compound eye149 - 189
Chapter V	
Pigment migration	190 - 230
General Discussions	231 - 236
Summary	237 - 242
Reference	243 - 283
Brief biodata of the author	(vi)

List of Tables

- Table 1. Results of staining reactions and histochemical tests obtained with the lens-cuticle of the house-fly Musca domestica. 24
- Table 2. Results of staining reactions and histochemical tests for the detection of acid mucopolysaccharides in the compound eye of the house-fly Musca domestica. 25
- Table 3. Results of staining reactions and histochemical tests obtained with the lens-cuticle of the honey bee, Apis cerana indica 29
- Table 4. Histochemical tests for the detection of acid mucopolysaccharides in the compound eye of the honey bee Apis cerana indica. 30
- Table 5. Staining reactions and histochemical tests obtained with the lens-cuticle of Macrobrachium birmanicum 32
- Table 6. Staining reactions and histochemical test for the detection of Mucopolysaccharides in the compound eye of Macrobrachium birmanicum . . . 35
- Table 7. Staining reactions and histochemical tests in the lens-cuticle of the marine prawn Metapinneus sp. 39

Table 8. Staining reactions and histochemical tests for detection of mucopolysaccharides in the eye of <u>Metapinneus</u> sp.	40
Table 9. Ascorbic acid turn over in the compound eye of <u>Musca domestica</u>	86
Table 10. Ascorbic acid turn over in the compound eye of <u>Apis cerana indica</u>	87
Table 11. Ascorbic acid turn over in the compound eye of <u>Macrobrachium birmanicum</u>	89
Table 12. Ascorbic acid turn over in the compound eye of <u>Metapinneus</u> sp.	91
Table 13. Staining reactions and histochemical tests for the detection of resilin in the lens-cuticle of <u>Musca domestica</u>	116
Table 14. Staining reactions and histochemical tests for detection of resilin in the lens-cuticle of <u>Apis cerana indica</u>	119
Table 15. Staining reactions and histochemical tests for detection of resilin in the lens-cuticle of <u>Macrobrachium birmanicum</u> .c.	120
Table 16. Staining reactions and histochemical tests for the detection of resilin in the lens-cuticle of <u>Metapinneus</u> sp.	122
Table 17. ATPase activities in the eye homogenates of <u>Musca domestica</u> , <u>Apis cerana indica</u> , <u>Macrobrachium birmanicum</u>	160
Table 18. Relative ATPase activity of eye-homogenate of <u>Macrobrachium birmanicum</u>	162
Table 19. Effect of cations upon the ATPase activity of eye-homogenate of <u>Macrobrachium birmanicum</u> .	163
